

Attachment for Stand Up Forklift

Stand Up Forklift Attachment - The ICE powered lift trucks are suitably labeled to the fuel kind utilized. Type "G" forklifts are gasoline fueled. These meet fire hazard least standards and is the most common designation for gas powered lift trucks. Trucks labeled "G" are not utilized in hazardous sites for apparent reasons. Type "GS" trucks are fueled by gasoline and meet all requirements of a Type "G" lift truck and have other machines installed to the electrical and fuel and exhaust system so as to allow them to be utilized in some unsafe places. Type "GS" forklifts are used in similar applications to Type "EE" electric trucks.

The "LP" class of forklifts are powered by LPG and do not meet minimum requirements for fire hazards and should not be utilized in hazardous places. This is however the most frequent designation for lift trucks fueled by LPG. Type "LPS" lift trucks are LPG fueled and meet all standards of a Type "G" truck. They have various pieces of machinery established to the fuel system, exhaust system and electrical system to allow them to be used in certain hazardous applications. Type "LPS" trucks are used in similar applications to Type "GS" and Type "EE" electric trucks.

As dual fuel units, the "G/LP" trucks can be operated on either LPG or gasoline. These lift trucks must not be utilized in dangerous sites, yet meet minimum standards for fire hazards. Type "GS/LPS" lift trucks are dual fuel models for the reason that they could be operated on LPG or gasoline without whatever change to the fuel system. These lift trucks meet all of the requirements of a Type "GS" or Type "LPS" truck and include other machinery installed to their electrical system, fuel system and exhaust system, in order to allow them to be utilized in some unsafe applications. Type "GS/LPS" forklifts are used in similar applications to Type "GS", Type "LPS" and Type "EE" electric trucks.

Type "D" forklifts represent diesel fueled and meet the minimum standards for fire hazards. These lift trucks labeled "D" are not used in hazardous sites. Type "DS" forklifts are diesel fueled and meet all the requirements of a Type "D" truck and have different machinery installed to the exhaust system, electrical system and fuel system so as to allow them to be utilized in certain unsafe sites. Type "DS" lift trucks are used in comparable applications to Type "GS", Type "LPS" and Type "EE" electric forklifts. Type "DY" lift trucks are diesel fueled and meet all the requirements of Type "DS" forklifts and also do not include whichever electrical devices installed. These use air starters and comprise provisions for controlling the temperature of truck parts. These type lift trucks are used in similar application to the Type "EE" electric trucks.
